Winscribe for Healthcare

Winscribe's speech productivity and medical documentation solutions enable GPs to use their voices to quickly and thoroughly document patient encounters and other reports at the point of care. Winscribe offers mobile, web-based and server-based digital dictation, speech recognition and medical documentation workflow management solutions that help clinicians produce documentation faster and more accurately, while protecting the security of sensitive patient information.

Healthcare Solutions

Dictation Management

Whether you are documenting work associated with surgical procedures, routine patient visits or diagnoses, dictation is the most efficient means of detailing medical documentation. Winscribe Dictation allows clinicians and support staff to dictate and transcribe work anywhere, anytime.

Speech Recognition

Winscribe Speech Recognition (WSR) assists clinicians and other healthcare professionals to deliver information up to 5 times faster and to spend less time typing. In addition, WSR helps to reduce administrative costs, and it enables physicians to spend more time with patients.

Mobile Documentation

Winscribe's mobile speech productivity solutions allow clinicians to access patient schedules, review documents and dictate their work on the move, with all the capabilities of desktop digital dictation. Winscribe supports BlackBerry, iPhone, iPad, Windows and Android mobile devices.

Document Management

Winscribe Text is a medical documentation management solution that handles all steps in the documentation process. The integrated system serves as a central platform for managing speech-driven documentation and reporting – all while helping organisations manage quality assurance.

Key Benefits

Over 350,000 clients around the world are using Winscribe's digital dictation, speech recognition and medical document management software to improve their documentation processes.

- Faster and more efficient creation of medical documents
- Securely dictate, review and sign medical records at the point of care
- Reduce document turnaround time and improve patient care
- Real-time monitoring and reporting for improved outcomes
- Reduce costs and improve GP and support staff productivity
- Integrate with and accelerate EHR and HIS usage and functionality

Flexible Licensing Options

In order to meet the diverse needs of organisations, both large and small, Winscribe offers its clients flexible options for software acquisition. For clients who wish to host and manage the software in their own data center, Winscribe's software can be acquired through traditional licensing. Alternatively, clients can elect to subscribe to Winscribe Cloud Services, a Software as a Service offering whereby the software and servers are managed by Winscribe – enabling your firm to save on IT resources. Lastly, Winscribe offers usage-based subscription options (onsite or in the cloud). Organisations that have a spectrum of dictation users, from heavy to infrequent, may find the usage-based model more beneficial and effective for reducing shelfware and enabling faster self-provisioning.
